

CMPE240
Spring 2023

v/

Jan 25, 23.

Today's Topics:

1° Syllabus, "Greensheet" of the Class.

San José State University
College of Engineering/Computer Engineering
Department
CMPE240 Advanced Microcomputer Design

S2023

Professor Hua Harry Li
Engineering Building, Rm 267A
Phone: (650) 400-1116 for Text Message Only
Email hua.li@sjsu.edu

Class Time: Mondays and Wednesdays 1:30-2:45 PM

Office Hours: Mondays and Wednesdays 4:30 – 5:30 PM Zoom

Zoom link: Join Zoom Meeting [https://us04web.zoom.us/j/9841607683?](https://us04web.zoom.us/j/9841607683?pwd=U1A3aEk1TnV4bjNLQk5CQkw0dDk4UT09)

pwd=U1A3aEk1TnV4bjNLQk5CQkw0dDk4UT09 Meeting ID: 984 160 7683 Passcode: 121092

Lecture Room: Engineering Building Room 303

Lab facility: Engineering Building Room 268

Prerequisites

Note: 1° Attendance; 2° Bring your Laptop Computer; 3° Prototype Board in Class Use/Inspection.

Prototype System { Board A: CPU module.

Board B:

For Graphics Display

4° Board A: CPU NXP LPC1114 to

Replace LPC1769 (Near the End of Its Life, By 2024)

6° Lab Access Code/Policy for the Lab Usage.

5° Good Throughout the entire School Session. But it will expire By the Last Day of the Class. (May 15th).

Lab facility: Engineering Building Room 268

Prerequisites

Cmpe 180D for non CMPE or non EE undergraduate major. Students who do not provide documentation of satisfied the class prerequisite requirements by the second class meeting will be dropped from the class.

Faculty Web Page and MYSJSU Messaging (Optional)

Copies of the course materials such as the syllabus, major assignment handouts, etc. can be found from github <https://github.com/hualili/CMPE240-Adv-Microprocessors/tree/master/2018F> and on SJSU CANVAS.

Note: Homeworks/Projects Announcement will be Posted on CANVAS. Submission on CANVAS only.

Course Description

Architecture of a computing system including system bus, memory subsystems and peripherals. Uni-directional and bidirectional bus architectures, SRAM and FLASH memories and their interfaces with the system bus. Design of Graphics Processing Engines, interrupt controller, transmitter, timers, display adapter, and other system peripherals and bus interfaces.

Required Texts/Readings

Textbook

- NXP LPC17xx datasheets;
- LPC1768/1769 CPU Module schematics;
- Dave Jaggar, ARM Architectural Reference Manual, Prentice Hall, ISBN 0-13-736299-4;
- Reference: ARM11 data sheets and on-line web materials on line <https://github.com/hualili/>, or at the SJSU CANVAS provided copyright permitted;
- (Optional) Nvidia Jetson NANO datasheet and user menu (online from Nvidia developer website);
- (Optional) RISC-V tutorial (the link to be given in the lecture) and FPGA verilog implementation guide (the link to be given in the lecture).

Note: Find the Datasheet on the Class github. CMPE244

Other Readings

- The reference material for ARM CPU hardware features, application notes, class handouts and lab assignments and reports, please see Professor Li's lecture notes, PPT, sample C code etc on line <https://github.com/hualili/CMPE240-Adv-Microprocessors> ;
- Professor Li's book materials, ARM Microprocessor Systems (in preparation for publication) <https://github.com/hualili/CMPE240-Adv-Microprocessors>

Other equipment / material requirements

32Bit RISC Prototype/Development Board.

Example: SCH for LPC1769

Note¹: CPU module, see Fig.1, its Two Connectors match the Pins in the SCH. here

Homework: Due A week from today.

1. Download NXP MCU Xpresso,
2. Install MCU Xpresso;
3. Start MCU Xpresso, then Screen Capture of your MCU Xpresso Start Page, make sure it has your Personal identifier on it.

Feb 1st (Wed)

Note: 1st Attendance Sheet
2nd Ref. from the Class github.

Chapter 2: LPC176x/5x Memory map
Rev. 3.1 — 2 April 2014

User manu

2.1 Memory map and peripheral addressing

The ARM Cortex-M3 processor has a single 4 GB address space. The following table shows how this space is used on the LPC176x/5x.

Table 3. LPC176x/5x memory usage and details

Address range	General Use	Address range details and description
0x0000 0000 to 0x17ff ffff	On-chip non-volatile	0x0000 0000 - 0x0007 ffff For devices with 512 kB of flash memory

Address for GPIO Controller. 0x2...
0x4...

a. Power-up Address: ~ when the CPU is powered up, it will go to this memory location to fetch the 1st Executable instruction

b. 8 memory Banks. Equal size of memory blocks.

$$2^{32}/8 = 2^{32}/2^3 = 2^{29} = 2^9 \cdot 2^{20}$$

512 Meg.

1st BANK is enumerated as BANK 0, ..., the last BANK is BANK 7.

c. We use 3 Bits from the Address Bus to define the starting Addr. of Each Bank.

$a_{31} a_{30} \dots a_1 a_0$ "Little Endian"

$a_{31} a_{30} a_{29} : a_{28} \dots a_1 a_0$
