2.

Course and Contact Information

Instructor(s): Harry Li

Office Location: Engineering Building, Room 267A

Telephone: (650) 400-1116

Email: hua.li@sjsu.edu

Office Hours: M.W. 3:00-4:00 pm

IN PERSON.

Class Days/Time: Mondays, Wednesdays, 1:30-2:45 pm

Classroom: Engineering Building, Room 331

Prerequisites: CmpE 180D for non CMPE or non EE undergraduates. Documentation of having satisfied the class prerequisite requirements will be required for students who have been dropped from the class.

3. Emphasis on the Advanced Nature of the Microprocessor Systems. → Embedded Nature, ARM CPU. → GPU: graphics Processing Unit

Architecture of a computing system including system bus, memory subsystems and peripherals. Uni-directional and bidirectional bus architectures, SRAM and FLASH memories and their interfaces with the system bus. Design of Graphics Processing Engines, interrupt controller, transmitter receiver, timers, display adapter, and other system peripherals and bus interfaces.

→ Engine for Deep learning, AI etc.

4. Hands-on.

Datasheets. → Spec. → Hardware

Homework Due 1 week
from Today. Sept. 20 (11:59 pm)

a) Build / Mount
CPU module and SPI
LCD Display module
On the Prototype Board,
Solder them on the
Board.)

b) Take a photo of your
Prototype System, and
Submit the photo with
Caption on it, with
your SID, Name.
Submission on
CANVAS.

* Bring your Prototype
Board to the class.

Example: Suppose we define

① PCLK = 20 MHz ;

② $f_{SPI} = 5\text{ KHz}$

(e.g. $\rightarrow 5\text{ Kbps}$)

③ Design By Assigning
SCR to Realize the
Bit Rate Requirement.

Sept. 13 (Wed)

Note: Inspection of the prototype
Board (Work-In-Progress)

Sol: From Eqn (1), Pg 431.

Hence, Our Design provides the following value for the Required f_{SPI} .

$$f_{SPI} = \frac{PCLK}{CPSDVSR * (SCR+1)} \dots (1)$$

from the given Condition, we have

$$CPSDVSR = 32 \text{ and}$$

$$SCR = 124$$

$$5 \times 10^3 = \frac{20 \times 10^6}{CPSDVSR * (SCR+1)}$$

Design By Iteration.

First, Let $CPSDVSR = 4$
Solve for SCR

$$CPSDVSR * (SCR+1) = \frac{20 \times 10^6}{4 \times 10^3}$$

$$CPSDVSR = 4$$

$$SCR+1 = \frac{4 \times 10^3}{4}$$

$$SCR = 1 \times 10^3 - 1 = 999 > 255$$

So, the Next Iteration of the Design

Let $CPSDVSR = 32$

from Eqn (1), we have

$$CPSDVSR * (SCR+1) = 4 \times 10^3$$

$$CPSDVSR = 32$$

$$SCR+1 = \frac{4 \times 10^3}{32}, SCR = \frac{4 \times 10^3}{32} - 1 = 124 < 255$$

$$160 \times 120 \times 24 \times 30 \stackrel{Z^x}{=}$$

$$\begin{array}{cccc} | & | & | & | \\ Z^7 & Z^7 & Z^5 & Z^5 \end{array} = Z^{14} \cdot Z^{10} = Z^4 \cdot Z^10 \cdot Z^{10} =$$

160 16 1K

$Z^7 = 128$ $Z^8 = 256$

$\therefore 16 \times 128 \times 256 = 1 \text{ meg}$

Progressive Scanning
2° Virtual Coordinate System.

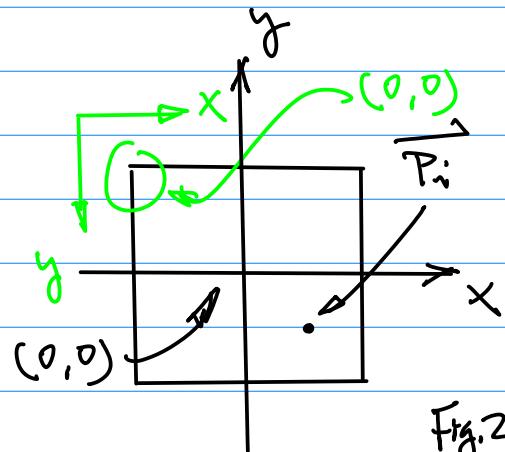

Fig.2

Sept. 20 (Wed).

Example: Discussion on 2D G.E. Design.

Definitions and Notations.

1° Physical Coordinate System.

3° A Picture element, e.g., a pixel, is denoted as

$$\overrightarrow{P_i(x_i, y_i)} \rightarrow \overrightarrow{P_i} \rightarrow (x_i, y_i)$$

... (1)

4° A Line Segment
Starting point $\overrightarrow{P_i(x_i, y_i)}$

Ending pt : $\vec{P}_{i+1}(x_{i+1}, y_{i+1})$

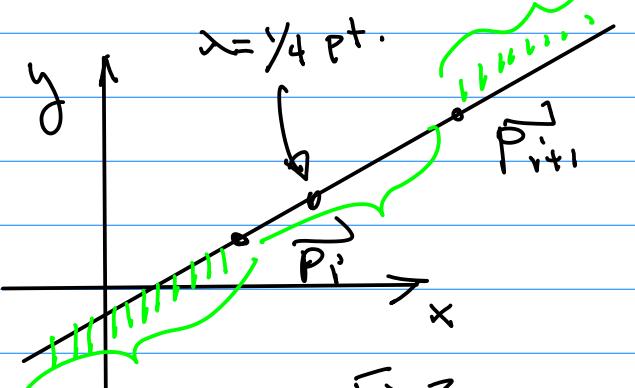

Fig.3

Let's Define the Line in Fig.3.

First, Define a Directional Vector.

$$\vec{d}(x, y) = \vec{P}_{i+1}(x_{i+1}, y_{i+1}) - \vec{P}_i(x_i, y_i)$$

$$= \vec{P}_{i+1} - \vec{P}_i$$

$$= (x_{i+1}, y_{i+1}) - (x_i, y_i)$$

$$= (x_{i+1} - x_i, y_{i+1} - y_i)$$

... (2)

Line Equation

$$\vec{P}(x, y) = \vec{P}_i(x_i, y_i) + \lambda \vec{d}(x, y)$$

$$= \vec{P}_i(x_i, y_i) + \lambda (\vec{P}_{i+1}(x_{i+1}, y_{i+1}) - \vec{P}_i(x_i, y_i)) \quad \dots (3)$$

When $\lambda = 0$, $\vec{P}(x, y) = \vec{P}_i(x_i, y_i)$ starting pt.

" $\lambda = 1$, $\vec{P}(x, y) = \vec{P}_{i+1}(x_{i+1}, y_{i+1})$ Ending pt.

" $0 \leq \lambda \leq 1$, or $\lambda \in [0, 1]$, Line Segment Between \vec{P}_i and \vec{P}_{i+1}

When $\lambda > 1$, $\vec{P}(x, y)$ points

Beyond $\vec{P}_{i+1}(x_{i+1}, y_{i+1})$

When $\lambda < 0$, $\vec{P}(x, y)$ points

Beneath $\vec{P}_i(x_i, y_i)$

Example: Suppose a starting point $\vec{P}_i(z, 3)$, and ending point $\vec{P}_{i+1}(7, 9)$.

Find:

- 1) Directional Vector $\vec{J}(x, y)$
- 2) Find the Line Equation $\vec{P}(x, y)$.
- 3) Find λ that defines $\frac{1}{4}$ of the distance from the pt. $P_i(x_i, y_i)$.

Sol:

$$\begin{aligned} \text{1) From Egn (2), } \\ \vec{J}(x, y) &= \vec{P}_{i+1}(x_{i+1}, y_{i+1}) - \vec{P}_i(x_i, y_i) \\ &= \vec{P}_{i+1}(7, 9) - \vec{P}(z, 3) \\ &= (7-z, 9-3) \\ &= (5, 6) \end{aligned}$$

C/C++ Code

$$\text{direc.x}[i] = P^t[i+1].x - P^t[i].x$$

2) Line Egn

$$\vec{P}(x, y) = \vec{P}_i(x_i, y_i) + \lambda [\vec{P}_{i+1}(x_{i+1}, y_{i+1}) - \vec{P}_i(x_i, y_i)]$$

\Rightarrow
 $= \vec{P}(z, 3) + \lambda [\vec{P}(7, 9) - \vec{P}(z, 3)]$
 $= (z, 3) + \lambda (7-z, 9-3)$
 $= (z, 3) + \lambda (5, 6)$

(3) Since $\frac{1}{4}$ of the distance from P_i , so let $\lambda = \frac{1}{4}$

Find that $\frac{1}{4}$ pt.

from

$$\begin{aligned} \vec{P}(x, y) &= (z, 3) + \lambda (5, 6) \Big|_{\lambda=\frac{1}{4}} \\ &= (z, 3) + \frac{1}{4} * (5, 6) \\ &= \left(\frac{8}{4} + \frac{5}{4}, \frac{12}{4} + \frac{6}{4}\right) \\ &= \frac{1}{4}(13, 18) \end{aligned}$$

Sept 25 (Monday)

Example: Prep. for Project / Design

Step 1. Design/Defining A set of
4 vectors/pts/Vertices

$$\{\vec{P}_i(x_i, y_i) \mid i=1, 2, \dots, 4\}$$

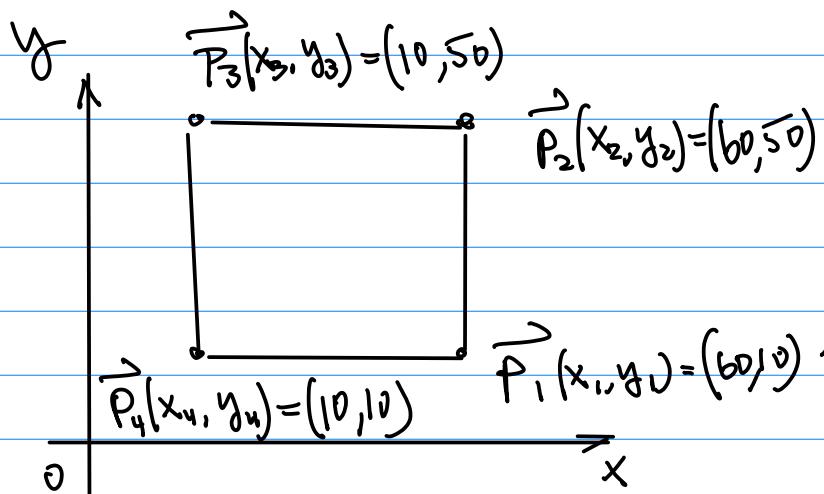

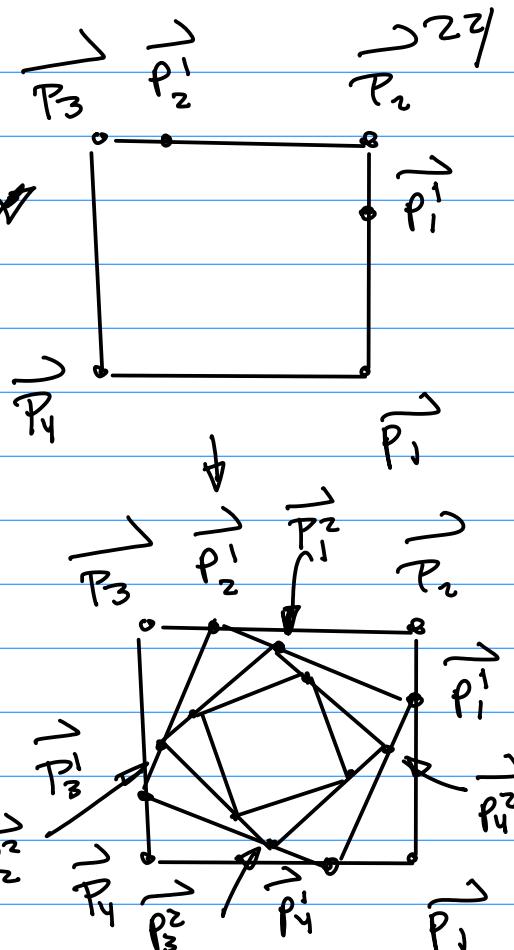

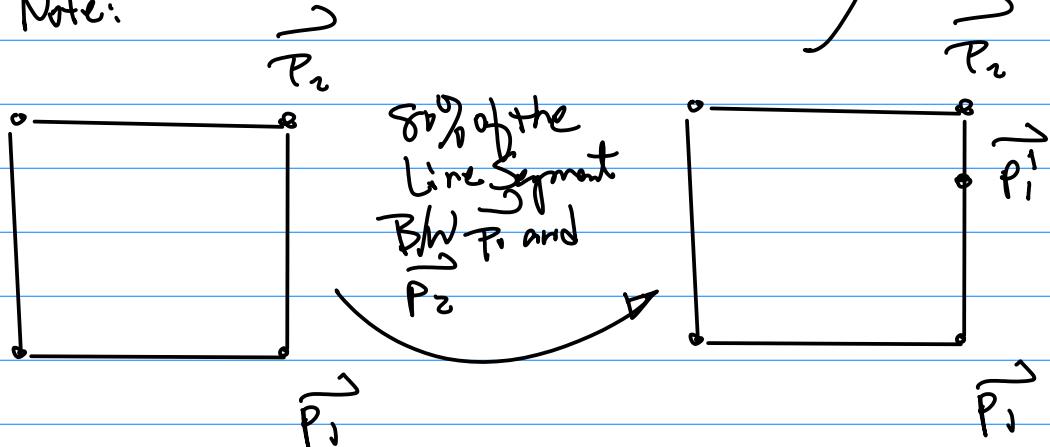

Fig.1 Vertical Coordinate System

Note: \vec{P}_i , for $i=1, 2, \dots, N$, is arranged in a Counter Clockwise direction. As a Convention.

(For \rightarrow Hidden Line/Hidden Surface Removal).

Note:

Note: 80% pts produces a Square of Counter Clockwise Rotation!!

From Eqn (3) on pp. 20,

$$\vec{P}(x, y) = \vec{P}_i(x_i, y_i) + \lambda (\vec{P}_{i+1}(x_{i+1}, y_{i+1}) - \vec{P}_i(x_i, y_i))$$

Let's $\lambda = 0.8$ for the above design.

for $i=1, 2, 3, 4$, $i+1 = 5$?

"Mod" operator
so, $i+1 \mod 5 = 1$

Consider Adding Superscript to define the levels.

$$\vec{P}_i^{j+1}(x_i^j, y_i^j) =$$

$$\vec{P}_i^j(x_i^j, y_i^j) + \lambda (\vec{P}_{i+1}^j(x_{i+1}^j, y_{i+1}^j) - \vec{P}_i^j(x_i^j, y_i^j))$$

Note: For the project, make $\dots(1)$
 $j \geq 10$

Coding Aspects:

$$x_i^{j+1} = x_i^j + \lambda (x_{i+1}^j - x_i^j)$$

... (za)

Color (r, g, b).

Intensity, 8 bit.

Width of the line

Style of the line

Sept. 27 (Wed).

Note: Project 1 assignment will be posted Today. Due 2 weeks.

Continuation on Project Screen Saver Design.

$$x[i+1][j] = x[i][j] + \text{lambda} *$$

$$(x[j][i+1] - x[i][j]);$$

Example: Code Sample, GitHub, drawline

Graphic Controller's Driver

Program, 2D tri ity

graphics function.

a.

i. Draw a Single pixel @ (x_i, y_i)

b. Color, r, g, b (red, green, blue)

c. Intensity 8 bit for each color.

$$(r(x, y), g(x, y), b(x, y))$$

ii. Draw A Line :

OpenGL

Starting pt.
(x_p, y_p),

(x_g, y_g). Ending pt.

Color (r, g, b).

Intensity, 8 bit.

Width of the line

Style of the line

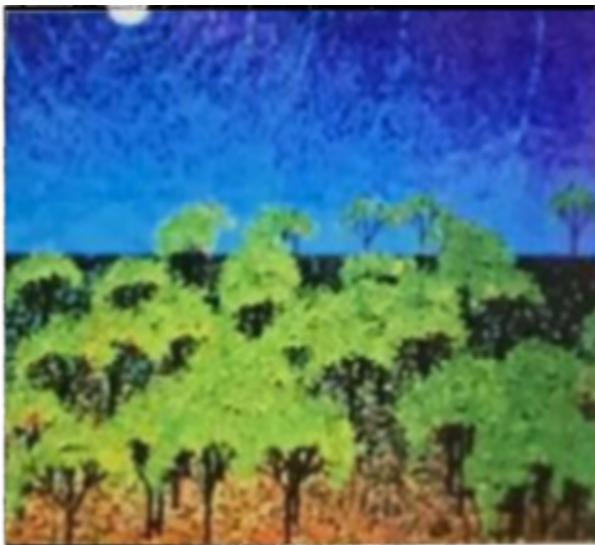

Fig.1

Construct / Generate the
Screen Saver.

Then, Create Branches.

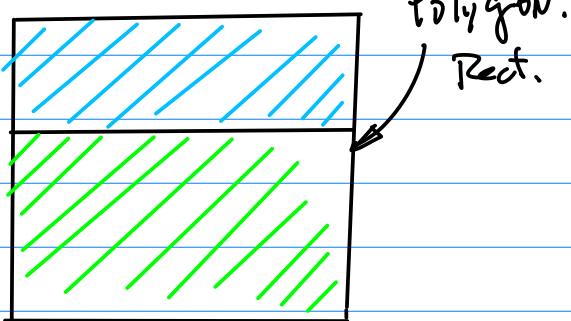

Fig.2

A Single Tree.

Build a trunk first.
With a starting point
 $\vec{P}_i(x_i, y_i)$ and ending
point $\vec{P}_{i+1}(x_{i+1}, y_{i+1})$.

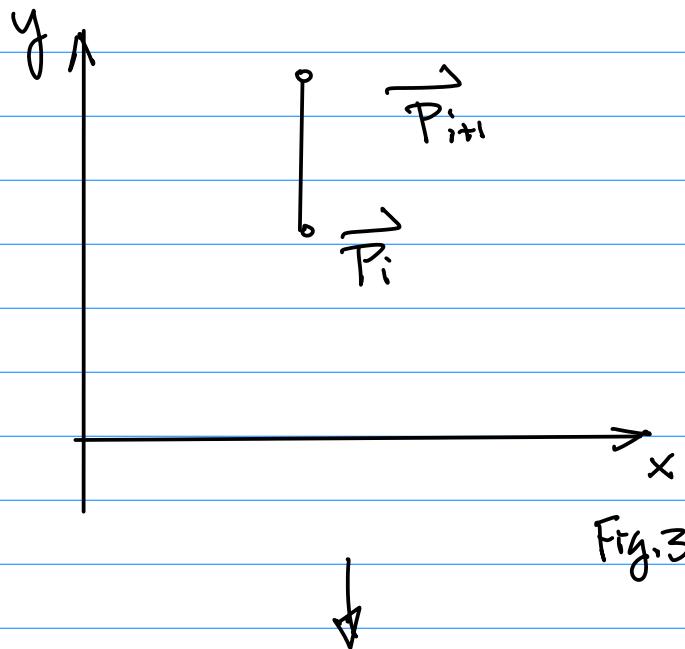

Fig.3

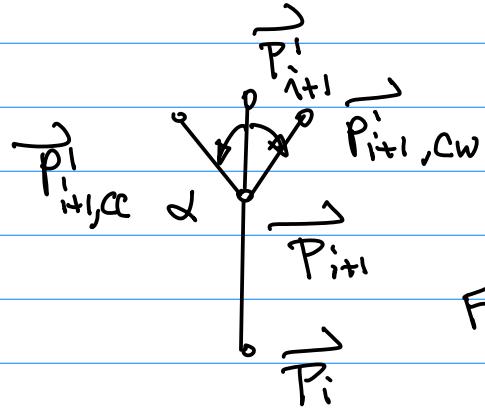

Fig.4

Duplicate the main Branch with $x=0.8$
(80% Reduction of its Length)

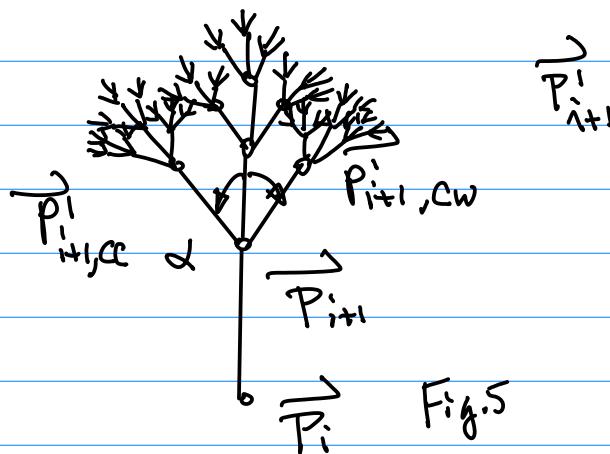

$$\vec{P} = \vec{P}_i + \lambda (\vec{P}_{i+1} - \vec{P}_i) \text{ for Example.}$$

$$\vec{P} = \vec{P}_{i+1} + \mu (\vec{P}_{i+1} - \vec{P}_i) \text{ OR}$$

Rotation Counter Clockwise to form
the side branch, denoted as $\vec{P}_{i+1,CC}$

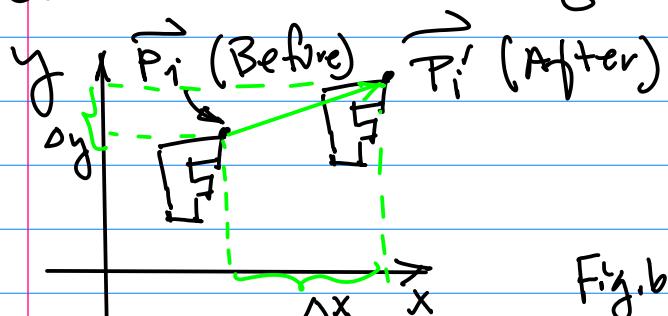

Rotation Clockwise to form
the 2nd branch (Symmetric)
denote it as $\vec{P}_{i+1,CW}^i$

Next, Continue the process
to grow the level for each
and every 2nd Points

Notations : Use the Ending points!
Subscript, then increment the
Level, e.g., the SuperScript
by 1.

Consider 2D Transformations. { Translation }

$$F: \left\{ \vec{P}_i(x_i, y_i) \mid i=1, 2, \dots, N \right\}$$

Translation.

After

$$\vec{P}_i'(x'_i, y'_i)$$

Before

$$\vec{P}_i(x_i, y_i)$$

$$\underline{x'_i} = x_i + \Delta x \dots (1a)$$

Similarly, for y:

$$\underline{y'_i} = y_i + \Delta y \dots (1b)$$

Introduce a col. vector for \vec{P}_i and \vec{P}_{i+1} . With added 1 Dummy Dimension.

So

$$\begin{pmatrix} x_i \\ y_i \\ 1 \end{pmatrix} \text{ for } \vec{P}_i(x_i, y_i)$$

$$\begin{pmatrix} x_{i+1} \\ y_{i+1} \\ 1 \end{pmatrix} \text{ for } \vec{P}_{i+1}(x_{i+1}, y_{i+1}).$$

Hence for $\vec{P}_i'(x'_i, y'_i)$:

$$\begin{pmatrix} x'_i \\ y'_i \\ 1 \end{pmatrix}$$

Therefore,

$$\begin{pmatrix} x'_i \\ y'_i \\ 1 \end{pmatrix} = \begin{pmatrix} 1 & 0 & \Delta x \\ 0 & 1 & \Delta y \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} x_i \\ y_i \\ 1 \end{pmatrix}$$

... (1c)

Rotation:

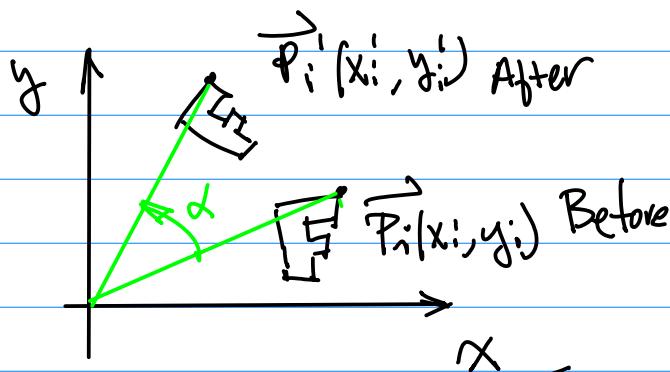

Fig. 7

α : CounterClockwise $\rightarrow \alpha > 0$

$$\begin{pmatrix} x'_i \\ y'_i \\ 1 \end{pmatrix} = \begin{pmatrix} \cos \alpha & -\sin \alpha & 0 \\ \sin \alpha & \cos \alpha & 0 \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} x_i \\ y_i \\ 1 \end{pmatrix}$$

... (2)

Example: To perform Rotation
in Fig. 4 in the tree Design.

Let's Translate P_{ini} to $(0,0)$.
the origin

Step 1. Translation

$$\begin{pmatrix} x'_{ini} \\ y'_{ini} \\ 1 \end{pmatrix} = \begin{pmatrix} 1 & 0 & DX \\ 0 & 1 & DY \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} x_{ini} \\ y_{ini} \\ 1 \end{pmatrix}$$

After Before

where $DX = -x_{ini}$

$DY = -y_{ini}$

Rotation

$$\begin{pmatrix} x'_{ini} \\ y'_{ini} \\ 1 \end{pmatrix} = \begin{pmatrix} \cos \alpha & -\sin \alpha & 0 \\ \sin \alpha & \cos \alpha & 0 \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} 1 & 0 & DX \\ 0 & 1 & DY \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} x_{ini} \\ y_{ini} \\ 1 \end{pmatrix}$$

$$= R \cdot T \begin{pmatrix} x_{ini} \\ y_{ini} \\ 1 \end{pmatrix}$$

Oct, 2nd (Monday).

Note 1. Quiz is scheduled

ON Next Monday :

1° Prototype Board
With CPU/LCD
mounted and Ready
to go.

2° Run Drawline Code;

3° Take 2 photos.

a). Entire System with
your Laptop System;

b) Screen Capture of
DrawLine Result.

4° Please Bring A Blank
Printer Paper, Answer

the questions (z), then take a photo using your Smartphone, send the photo to your Laptop, then Convert the photo to pdf format.

5) Submission on CANVAS

Zip file.

- { 1. Photo (png, jpeg)
of the System.
- 2. Photo of the Drawline
Result;
- 3. pdf Page

FirstName_LastName_SID(4 Digits)-Z40.zip

Note 2: Project 1 is Due 2 weeks.

Oct 15 (Sun), 11:59 pm

Requirements to Be Posted
on CANVAS.

Example: Continuation from

$$\frac{R \cdot T}{\text{---}} \quad \dots (1)$$

↑
Rotation Preprocessing

We need Postprocessing.

PostProcessing: To Undo the Preprocessing.

$$T^{-1} \cdot T = I$$

Inverse

physical meaning of T^{-1}
for Undoing Translation.

a) Translation Matrix.

by making $\Delta x \rightarrow -\Delta x$

b) Similarly for the y. Change
 $\Delta y \rightarrow -\Delta y$

$$T^{-1} = \begin{pmatrix} 1 & 0 & -\Delta x \\ 0 & 1 & -\Delta y \\ 0 & 0 & 1 \end{pmatrix} \quad \dots (2)$$

$$\begin{pmatrix} x'_i \\ y'_i \\ 1 \end{pmatrix} = T^{-1} R T \begin{pmatrix} x_i \\ y_i \\ 1 \end{pmatrix}$$

After Before
 ... (3)

$$\begin{aligned}
 T^{-1} R T &= \begin{pmatrix} 1 & 0 & -\Delta x \\ 0 & 1 & -\Delta y \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} \cos\theta & -\sin\theta & 0 \\ \sin\theta & \cos\theta & 0 \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} 1 & 0 & \Delta x \\ 0 & 1 & \Delta y \\ 0 & 0 & 1 \end{pmatrix} \\
 &= \begin{pmatrix} 1 & 0 & -\Delta x \\ 0 & 1 & -\Delta y \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} \cos\theta & -\sin\theta & \cos\theta \cdot \Delta x - \sin\theta \cdot \Delta y \\ \sin\theta & \cos\theta & \sin\theta \cdot \Delta x + \cos\theta \cdot \Delta y \\ 0 & 0 & 1 \end{pmatrix} \\
 &= \begin{pmatrix} \cos\theta & -\sin\theta & \cos\theta \cdot \Delta x - \sin\theta \cdot \Delta y - \Delta x \\ \sin\theta & \cos\theta & \sin\theta \cdot \Delta x + \cos\theta \cdot \Delta y - \Delta y \\ 0 & 0 & 1 \end{pmatrix} \dots (8).
 \end{aligned}$$

Therefore, we have

$$\left\{
 \begin{array}{l}
 x_i'' = \cos\theta \cdot x_i - \sin\theta \cdot y_i + \cos\theta \cdot \Delta x - \sin\theta \cdot \Delta y - \Delta x \quad \dots (4a) \\
 y_i'' = \sin\theta \cdot x_i + \cos\theta \cdot y_i + \sin\theta \cdot \Delta x + \cos\theta \cdot \Delta y - \Delta y \quad \dots (4b)
 \end{array}
 \right.$$

Example: Drawing Code.

Emphasis on the Graphics Library
functions, e.g.

primitive graphics Routines.

Note: Resolution

```

30 uint8_t dest_addr[SSP_BUFSIZE];
31
32
33 #define ST7735_TFTWIDTH 127
34 #define ST7735_TFTHEIGHT 159
35
36 #define ST7735_CASET 0x2A
37 #define ST7735_RASET 0x2B

```

Col.
Row.

PP.23

SPI LCD
physical
No. of
M: Row No.v. Fig.1.
N: Col.

(x_v, y_v) for Virtual ~
 (x_p, y_p) for Physical ~

Note: The mapping from Virtual display to the physical display is given in the following equations

$$x_p = x_v + \frac{M}{2} \dots (1)$$

$$y_p = -y_v + \frac{N}{2} \dots (2)$$

Consider X Comp. "Before" (e.g. in the virtual display) and "After" (e.g. in the physical display)

After ? Before

$$x_p = \frac{M}{2} + x_v$$

Therefore

$$x_p = x_v + \frac{M}{2}$$

Eqn(1) from PP.23 Ref. is verified. for y

After

$$y_p = \frac{N}{2} - y_v$$
